- Connection to database using Node.js

Navigation Assistance Walking Stick — embedded system

- An Arduino Based project, aiming to provide accurate navigation to visually impaired person indoor
- Multiple Sensors installed on the stick for detection and navigation
- Coordinates with fully voice-controlled software built with Android Studio.

SKILLS

Software Development:

Java, C++, Python, SQL

Web Development:

HTML, CSS, ReactJs

Big Data: Hadoop, Hive, Spark

Version Control:

GitHub, BitBucket

Project Management:

Maven, Docker

Other:

Experienced in running sprints with Agile methodologies

Ability to prioritize workload and handle multiple tasks simultaneously

Certification

Completion of online Course:

Ultimate MySQL BOOTCAMP: Go from SQL beginner to expert from UDEMY
